Assignment 01

You are tasked with developing a static website based on the attached design. The website must be created using only HTML and CSS. Do not utilize any CSS frameworks for this assignment. You will need to conduct research on CSS Positioning and the CSS display property to successfully complete this task. Refer to the MDN web documentation for guidelines on CSS positioning.

1. Create static website using HTML and CSS according to the design provided below. Focus on understanding and implementing CSS Positioning and CSS display property to achieve the desired layout.
2. Setup a Github repository to track your code changes. Your repository should have a minimum of 03 commits, demonstrating the evaluation of your codebase.
3. Submit the link to your Github repository via the classroom assignment portal on or before the specified deadline. Please note that the late submissions will not be eligible for the grading.

Additional Notes

- Take time to research and understand CSS Positioning and the CSS Display property. Utilize resources such as MDN web documentation to clarify questions you may have during the development process.
- Maintain a clean and organized code structure. Use appropriate HTML tags and CSS class/ID s to ensure the readability and ease of understanding.
- While you can seek guidance and resources online, the work submitted must be your own. Do not copy-paste codes from external sources. Plagiarism will result in penalties.
